

## EMC TEST REPORT

### Multimedia equipment

|                                    |  |   |
|------------------------------------|--|---|
| Test Report No. ....:              | TCT240815E020  |   |
| Date of issue ....:                | Aug. 22, 2024  |   |
| Testing laboratory .....           | Shenzhen TCT Testing Technology Co., Ltd.  |   |
| Testing location/ address.....:    | 2101 & 2201, Zhenchang Factory, Renshan Industrial Zone, Fuhai Subdistrict, Bao'an District, Shenzhen, Guangdong, China  |   |
| Applicant's name .....             | Shenzhen Huafurui Technology Co., Ltd.   |   |
| Address.....:                      | Unit 601-03, 6/F, Block A, Building 1, Ganfeng Technology Building, No. 993 Jiaxian Road, Xiangjiaotang Community, Bantian Street, Longgang District, Shenzhen, P.R. China |   |
| Manufacturer's name .....          | Shenzhen Huafurui Technology Co., Ltd.   |   |
| Address.....:                      | Unit 601-03, 6/F, Block A, Building 1, Ganfeng Technology Building, No. 993 Jiaxian Road, Xiangjiaotang Community, Bantian Street, Longgang District, Shenzhen, P.R. China |   |
| Standard(s).....:                  | EN 55032:2015+A11:2020+A1:2020<br>EN 55035:2017+A11:2020<br>EN IEC 61000-3-2:2019+A1:2021<br>EN 61000-3-3:2013+A1:2019+A2:2021   |   |
| Test item description.....:        | Smartphone   |   |
| Trade Mark.....:                   | CUBOT  |   |
| Model/Type reference .....         | A30  |   |
| Rating(s) .....                    | Refer to EUT description of page 3   |   |
| Date of receipt of test item.....: | Aug. 15, 2024  |   |
| Date (s) of performance of test:   | Aug. 15, 2024 ~ Aug. 22, 2024  |   |
| Tested by (+signature).....:       | Kyle ZHOU  |  |
| Check by (+signature) .....        | Howie LYU  |  |
| Approved by (+signature) .....     | Tomsin   |  |

#### General disclaimer:

This report shall not be reproduced except in full, without the written approval of Shenzhen TCT Testing Technology Co., Ltd. This document may be altered or revised by Shenzhen TCT Testing Technology Co., Ltd. personnel only, and shall be noted in the revision section of the document. The test results in the report only apply to the tested sample.

## Table of Contents

|   |    |
|---|----|
| 1. General Product Information .....  | 3  |
| 1.1. EUT description .....  | 3  |
| 1.2. Model(s) list.....   | 3  |
| 2. Test Information.....  | 4  |
| 2.1. EUT operation mode(s).....   | 4  |
| 2.2. Special accessories and auxiliary equipment.....                             | 4  |
| 2.3. Configuration of system under test .....                                     | 5  |
| 2.4. General test conditions .....  | 6  |
| 3. Test Result Summary .....  | 7  |
| 4. List of Test Equipment .....   | 8  |
| 5. Test Conditions and Results (Emission).....                                    | 10 |
| 5.1. Disturbance voltage at mains terminals .....                                 | 10 |
| 5.2. Disturbance voltage at telecommunication terminals.....                      | 13 |
| 5.3. Disturbance voltage at antenna terminals.....                                | 14 |
| 5.4. Conducted disturbance between 1 GHz to 18 GHz.....                           | 15 |
| 5.5. Radiated emission.....   | 16 |
| 5.6. OUTDOOR UNITS – Limits of radiated disturbance between 1 GHz to 18 GHz ..... | 21 |
| 5.7. Harmonic current emissions.....  | 22 |
| 5.8. Voltage changes, voltage fluctuations and flicker.....                       | 23 |
| 6. Test Conditions and Results (Immunity).....                                    | 25 |
| 6.1. General information .....  | 25 |
| 6.2. Electrostatic discharge immunity.....  | 26 |
| 6.3. Radiated, radio-frequency, electromagnetic field immunity.....               | 29 |
| 6.4. Electrical fast transient/burst immunity.....                                | 31 |
| 6.5. Surge immunity .....   | 33 |
| 6.6. Immunity to conducted disturbances, induced by radio-frequency fields .....  | 35 |
| 6.7. Broadband impulse noise disturbances for xDSL ports.....                     | 37 |
| 6.8. Power frequency magnetic field immunity (PFMF).....                          | 38 |
| 6.9. Voltage dips, short interruptions and voltage variations immunity .....      | 39 |
| 7. Test set-up photo.....   | 41 |
| 8. Photo of the EUT.....  | 47 |

## 1. General Product Information

### 1.2.Model(s) list

None.

## 2. Test Information

### 2.1.EUT operation mode(s)

| Mode # | Operating mode description | Test voltage                                     |
|--------|----------------------------|--|
| 1      | Charging + Camera Shooting | AC 230 V/50 Hz                                   |
| 2      | Charging + Memory Playing  | AC 230 V/50 Hz                                   |
| 3      | Charging + TF Card Playing | AC 230 V/50 Hz                                   |
| 4      | Data Transmitting          | DC 5 V (Notebook Computer Input AC 230 V/ 50 Hz) |

| Test worst operating mode  |        |
|--|--------|
| Disturbance voltage at mains terminals   | Mode 1 |
| Radiated emission(30 MHz to 1GHz)  | Mode 1 |
| Radiated emission(Above 1GHz)  | Mode 1 |
| Remark: 1. The worst measurement data and graphical presentation show in this report.<br>2.The test data in this report is power supplied by adapter 1 which is in the worse case. |        |

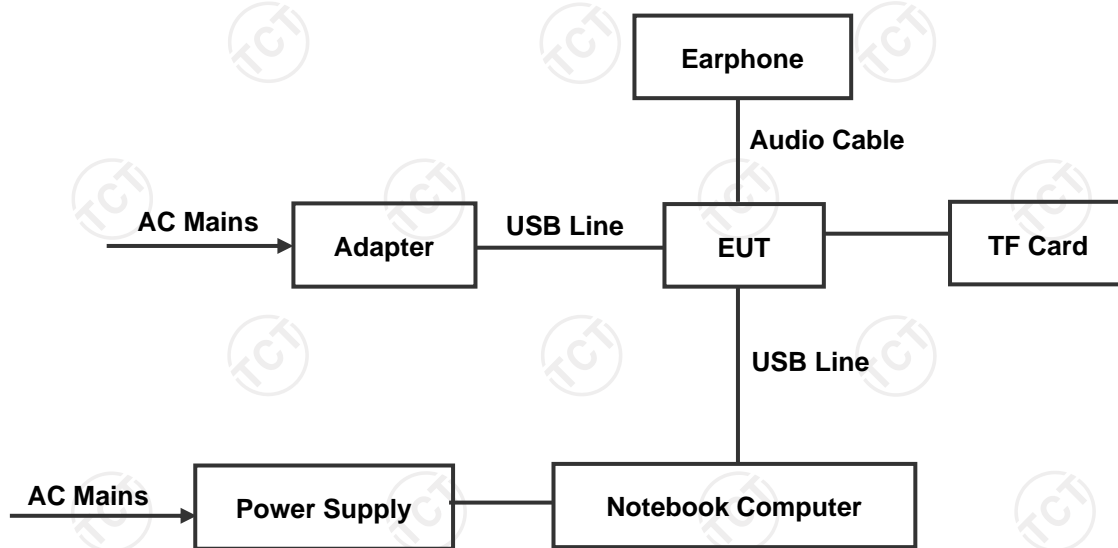

### 2.2.Special accessories and auxiliary equipment

| Product Type      | Manufacturer | Model No.  | Serial No.                   |
|-------------------|--------------|------------|------------------------------|
| Notebook Computer | DELL         | A30 3500   | 00342-36088-99832-AAOEM      |
| Power Supply      | DELL         | HA130PM190 | CN-0CY0JM-CH200-0B6-7405-A01 |
| TF Card           | Kingston     | SDCS2/32GB | 2210B814822                  |

#### Auxiliary cable description

| Port name | Specified length(m) | Shielded | Unshielded |
|-----------|---------------------|----------|------------|
| /         | /                   | /        | /          |

## 2.3.Configuration of system under test

(EUT: Smartphone)

## 2.4. General test conditions

### Environmental reference conditions

The climatic conditions during the tests are within the limits specified by the manufacturer for the operation of the EUT and the test equipment.

The climatic conditions during the tests were within the following limits:

| Temperature   | Humidity    | Atmospheric pressure |
|---------------|-------------|----------------------|
| 15 °C – 35 °C | 30 % - 60 % | 86 kPa – 106 kPa     |

If explicitly required in the basic standard or applied product standard the climatic values are recorded and documented separately in this test report.

### Measurement uncertainties

| Test Item  | Uncertainty |
|--|-------------|
| Uncertainty for Disturbance voltage at the mains terminals             | 3.32 dB     |
| Uncertainty for Disturbance voltage at the telecommunication terminals | 4.10 dB     |
| Uncertainty for Radiated emission (30 MHz to 1 GHz)                    | 4.86 dB     |
| Uncertainty for Radiated emission (1 GHz to 6 GHz)                     | 4.91 dB     |

The overall measurement uncertainty of a measurement is defined as the range of which can be supposed that it contains the true value with a specified probability.

This probability is 95 % for the generally specified measurement uncertainty (so-called expanded measurement uncertainty).

The limits for emission measurements and the Test levels for immunity tests in the applied standards were defined taking into consideration the accuracy limits for measurement and testing equipment required by the Basic standards.

All measurement and test results of the EMC laboratory of Shenzhen TCT Testing Technology Co., Ltd. fulfil the requirements for measurement uncertainties according to the standards applied.

Decision rule for statement(s) of conformity is based on simple acceptance specified in Clause 4.3.3 in IEC Guide 115:2023.

### 3. Test Result Summary

| EN 55032:2015+A11:2020+A1:2020   |         |
|--|---------|
| Requirement – Test case  | Verdict |
| Classification Class ( <input type="checkbox"/> A <input checked="" type="checkbox"/> B) | -       |
| Disturbance voltage at mains terminals   | Pass    |
| Disturbance voltage at telecommunication terminals                                       | N/A     |
| Disturbance voltage at antenna terminals   | N/A     |
| N/A Conducted disturbance between 1 GHz to 18 GHz  | N/A     |
| Radiated disturbance 30 MHz –6 GHz   | Pass    |
| OUTDOOR UNITS – Limits of radiated disturbance between 1 GHz to 18 GHz                   | N/A     |
| EN IEC 61000-3-2:2019+A1:2021  |         |
| Requirement – Test case  | Verdict |
| Harmonic current emissions   | N/A     |
| EN 61000-3-3:2013+A1:2019+A2:2021  |         |
| Requirement – Test case  | Verdict |
| Voltage changes, voltage fluctuations and flicker  | Pass    |
| EN 55035:2017+A11:2020   |         |
| Requirement – Test case  | Verdict |
| Electrostatic discharge immunity (ESD)   | Pass    |
| Radiated, radio-frequency, electromagnetic field immunity (RS)                           | Pass    |
| Electrical fast transient/burst immunity (EFT/B)   | Pass    |
| Surge immunity   | Pass    |
| Immunity to conducted disturbances, induced by radio-frequency fields (CS)               | Pass    |
| Broadband impulse noise disturbances for xDSI ports                                      | N/A     |
| Power frequency magnetic field immunity (PFMF)   | Pass    |
| Voltage dips, short interruptions and voltage variations immunity (DIPS)                 | Pass    |

| Test case verdicts                                  |          |
|---|----------|
| - Test case does not apply to the test object ..... | N/A      |
| - Test object does meet the requirement.....        | P (Pass) |
| - Test object does not meet the requirement .....   | F (Fail) |

## 4. List of Test Equipment

| Equipment  | Manufacturer | Model No.     | Serial No.   | Cal. Due   |
|--|--------------|---------------|--------------|------------|
| <b>Disturbance voltage at mains terminals</b>                            |              |               |              |            |

| Remark..... :   | This test isn't applicable because the EUT doesn't have relative function. Therefore this test is not applicable for this EUT.   |                       |                                   |                          |                              |                            |

## 5.4. Conducted disturbance between 1 GHz to 18 GHz

|                            |  |                     |
|----------------------------|--|---------------------|
| Test requirement .....     | EN 55032:2015+A11:2020+A1:2020   |                     |
| Test frequency range ..... | 1 GHz to 18 GHz  |                     |
| Limits .....               | Frequency (GHz)  | Power Limits (dBpW) |
|                            |  | Average             |
|                            | 1 to 18  | 63                  |
| Test method .....          | In the case of a detachable feed horn, the radiated emission of the LO leakage within 7° of the main beam axis can be measured directly by a power measurement at the feed horn interface. If a suitable interface (typically types R120, C120) is available, a power meter or spectrum analyzer can be connected to the LNB via a suitable adapter. Due allowance shall be made for the feed losses between the available interface and the antenna flange. |                     |
| Ambient temperature .....  | /  |                     |
| Relative humidity .....    | /  |                     |
| Test location .....        | /  |                     |

| Test method .....       | Measurements were made in a 3/10-meter semi-anechoic chamber that complies to CISPR 16. Preliminary (peak) measurements were performed at an antenna to EUT separation distance of 3/10 meters with the receive antenna located at 1 to 4-meter height in both horizontal and vertical polarities. Final measurements (quasi-peak) were then performed by rotating the EUT 360° and adjusting the receive antenna height from 1 to 4-meters. All frequencies were investigated in both horizontal and vertical antenna polarity, where applicable. |                           |                          |

## 5.6. OUTDOOR UNITS – Limits of radiated disturbance between 1 GHz to 18 GHz

|                         |   |                                |
|-------------------------|---|--------------------------------|
| Test requirement .....  | EN 55032:2015+A11:2020+A1:2020  |                                |
| Test frequency range..  | 1 GHz to 18 GHz   |                                |
| Limits .....            | <b>Limits – LO leakage and spurious radiated emissions from the EUT, in the region outside +/- 7° of the main beam axis.</b>  |                                |
|                         | <b>Frequency (GHz)</b>  | <b>Class B limits (dBμV/m)</b> |
|                         |   | <b>Average</b>                 |
|                         | 1 to 2.5  | 50                             |
|                         | 2.5 to 18   | 64                             |
|                         | <b>Limits – LO leakage from the EUT, in the region within +/- 7° of the main beam axis.</b>   |                                |
|                         | <b>Frequency (GHz)</b>  | <b>Class B limits (dBμV/m)</b> |
|                         |   | <b>Average</b>                 |
|                         | 1 to 18   | 70                             |
| Test method .....       | Measurements were made in a 3-meter Open Area Test Site that complies to CISPR 16. Preliminary (peak) measurements were performed at an antenna to EUT separation distance of 3 meter above 1GHz. The EUT was rotated 360° with the receive antenna located in horizontal and vertical polarities. Final measurements (average detector above 1GHz) were then performed by rotating the EUT 360°. All frequencies were investigated in both horizontal and vertical antenna polarity, where applicable. |                                |
| Ambient temperature..   | /   |                                |
| Relative humidity ..... | /   |                                |
| Test location .....     | /   |                                |
| Test model(s) .....     | /   |                                |
| EUT operation mode..    | /   |                                |
| Test results .....      | N/A   |                                |
| Remark.....             | This test isn't applicable because the EUT doesn't have relative function. Therefore this test is not applicable for this EUT.  |                                |

## 5.7. Harmonic current emissions

|   |   |  |  |
|---|---|--|--|
| Test requirement .....                                      | EN IEC 61000-3-2:2019+A1:2021   |  |  |
| Limit classification in accordance with the standard..... : | Limits - Class A equipment  |  |  |
|   | Odd harmonics   |  |  |
|   | Harmonic order (n)  | Maximum permissible harmonic current (A)           |  |
|   | 3   | 2.30   |  |
|   | 5   | 1.14   |  |
|   | 7   | 0.77   |  |
|   | 9   | 0.40   |  |
|   | 11  | 0.33   |  |
|   | 13  | 0.21   |  |
|   | 15 ≤ n ≤ 39   | 0.15 x 15/n  |  |
|   | Even harmonics  |  |  |
|   | 2   | 1.08   |  |
|   | 4   | 0.43   |  |
|   | 6   | 0.30   |  |
|   | 8 ≤ n ≤ 40  | 0.23 x 8/n   |  |
|   | Limits – Class D equipment  |  |  |
|   | Harmonic order (n)  | Maximum permissible harmonic current per watt Ma/W | Maximum permissible harmonic current A |
|   | 3   | 3.4  | 2.30                                   |
|   | 5   | 1.9  | 1.14                                   |
|   | 7   | 1.0  | 0.77                                   |
|   | 9   | 0.5  | 0.40                                   |
|   | 11  | 0.35   | 0.33                                   |
|   | 13 ≤ n ≤ 39   | 3.85/n   | See Class A limits                     |
| Test method..... :  | This test consists on the measurement of harmonics components of the input current which may be produced by equipment having an input current up to and including 16 A per phase, and intended to be connected to public low-voltage distribution systems. The equipment is tested under specified conditions of operation. |  |  |
| Ambient temperature..... :                                  | /   |  |  |
| Relative humidity .....                                     | /   |  |  |
| Test location .....   | /   |  |  |
| Test model(s) .....   | /   |  |  |
| EUT operation mode..... :                                   | /   |  |  |
| Test results .....  | N/A   |  |  |
| Remark..... :   | The EUT rated power of 75 W or less, limits are not specified in standard. Therefore this test is not applicable for this EUT.  |  |  |

## 5.8.Voltage changes, voltage fluctuations and flicker

|                           |   |
|---------------------------|---|
| Test requirement .....    | EN 61000-3-3:2013+A1:2019+A2:2021   |
| Applied limit .....       | <p>The value of <math>P_{st}</math> shall be not greater than 1.0<br/> The value of <math>P_{it}</math> shall be not greater than 0.65<br/> The value of <math>d(t)</math> during a voltage change shall not exceed 3.3 % for more than 500 ms<br/> The relative steady-state voltage change, <math>dc</math> shall not exceed 3.3 %<br/> The maximum relative voltage change <math>d_{max}</math> shall not exceed:</p> <p>a) 4 % without additional conditions<br/> b) 6 % for equipment which is:</p> <ul style="list-style-type: none"> <li>- switched manually, or</li> <li>- switched automatically more frequently than twice per day, and also has either a delayed restart (the delay being not less than a few tens of seconds), or manual restart, after a power supply interruption</li> </ul> <p>c) 7 % for equipment which is</p> <ul style="list-style-type: none"> <li>- attended whilst in use (for example : hair dryers, vacuum cleaners, kitchen equipment such as mixers, garden equipment such as mowers, portable tools such as electric drills), or</li> <li>- switched on automatically, or is intended to be switched on manually, no more than twice per day, and also has either a delayed restart (the delay being not less than a few tens of seconds) or manual restart, after a power supply interruption.</li> </ul> |
| Test method .....         | This test consists on the measurement of voltage changes, voltage fluctuations and flicker which may be produced by equipment having an input current $\leq 16$ A per phase, and intended to be connected to public low-voltage distribution systems. The equipment is tested under specified conditions of operation.  |
| Observation time .....    | 10 Minutes  |
|                           | 120 Minutes   |
|                           | 24 times switching according to Annex B   |
| Ambient temperature ..... | 24.4 °C   |
| Relative humidity .....   | 52 %  |
| Test location .....       | 2101 & 2201, Zhenchang Factory, Renshan Industrial Zone, Fuhai Subdistrict, Bao'an District, Shenzhen, Guangdong, China   |
| Test model(s) .....       | A30   |
| EUT operation mode .....  | Mode 1  |
| Test results .....        | Pass  |
| Remark .....              | /   |

## Measurement data of the result

## 6. Test Conditions and Results (Immunity)

### 6.1.General information

| Performance criteria as defined by the standard |   |
|---|---|
| Criterion                                       | Description from standard   |
| A   | The equipment shall continue to operate as intended without operator intervention. No degradation of performance or loss of function is allowed below a performance level specified by the manufacturer when the equipment is used as intended. The performance level may be replaced by a permissible loss of performance. If the minimum performance level or the permissible performance loss is not specified by the manufacturer, then either of these may be derived from the product description and documentation, and by what the user may reasonably expect from the equipment if used as intended. |
| B   | During the application of the disturbance, degradation of performance is allowed. However, no unintended change of actual operating state or stored data is allowed to persist after the test.<br>After the test, the equipment shall continue to operate as intended without operator intervention; no degradation of performance or loss of function is allowed, below a performance level specified by the manufacturer, when the equipment is used as intended.<br>The performance level may be replaced by a permissible loss of performance.  |
| C   | Loss of function is allowed, provided the function is self-recoverable, or can be restored by the operation of the controls by the user in accordance with the manufacturer's instructions. A reboot or re-start operation is allowed. Information stored in non-volatile memory, or protected by a battery backup, shall not be lost.  |

## 6.2. Electrostatic discharge immunity

| Test requirement .....          | EN 55035:2017+A11:2020  |                   |
|---------------------------------|---|-------------------|
| Basic standard .....            | EN 61000-4-2:2009   |                   |
| Test level .....                | Discharge type  | Discharge voltage |
|                                 | Contact discharge voltage   | ±4 kV             |
|                                 | Air discharge voltage   | ±8 kV             |
| Storage capacitor .....         | 150 pF  |                   |
| Discharge resistor .....        | 330 Ω   |                   |
| Horizontal coupling plate ..... | 1.6 x 0.8 m   |                   |
| Vertical coupling plate .....   | 0.5 x 0.5 m   |                   |
| Number of discharges .....      | Min. 10 per discharge location  |                   |
| Discharge interval .....        | 1 second  |                   |
| Performance criteria .....      | B   |                   |
| Test method .....               | The table-top equipment under test is placed on a wooden table, 0.8 m high, standing on the ground reference plane. A horizontal coupling plane (HCP), 1.6 x 0.8 m, is placed on the table. The EUT and the cables are isolated from the coupling plane by an insulating support 0.5 mm thick. The floor standing equipment is isolated from the ground reference plane by an insulating support about 0.1 m thick. The vertical coupling plane (VCP) of dimensions 0.5 m x 0.5 m is placed parallel to, and positioned at a distance of 0.1 m from, the EUT. |                   |

## 6.3.2. Test results of observations description

/ - Not performed or not required.

1 –No obvious change of function was found after the test.

2 –The function stopped during the test, but can be recoverable by itself operation after the test.

3 –The function stopped during the test, but can be recoverable manually after the test.

## 6.4. Electrical fast transient/burst immunity

| Test requirement .....     | EN 55035:2017+A11:2020  |         |
|----------------------------|---|---------|
| Basic standard .....       | EN 61000-4-4:2012   |         |
| Test level .....           | Measurement port  | Voltage |
|                            | Input a.c. power ports  | ±1 kV   |
|                            | Input d.c. power ports  | ±0.5 kV |
|                            | Analogue/digital data ports   | ±0.5 kV |
|                            | xDSI  | ±0.5 kV |
| Burst duration .....       | 15 ms   |         |
| Burst period .....         | 300 ms  |         |
| Repetition frequency ..... | 5 kHz or 100 kHz  |         |
| Test time .....            | 2 minutes per level & polarity  |         |
| Performance criteria ..... | B   |         |
| Test method .....          | Measurements were made on a ground plane that extends 0.5-meter minimum beyond all sides of the system under test. Mains power tests were conducted with the product connected to a Coupling/Decoupling Network (CDN). One of each unique interface was tested for a period of 2 minute per polarity. The bursts are applied on the mains supply port by using a coupling decoupling network and on signal and control lines ports by using a capacitive clamp. |         |
| Ambient temperature .....  | 24.4 °C   |         |
| Relative humidity .....    | 52 %  |         |
| Air pressure .....         | 101.1 kPa   |         |
| Test location .....        | 2101 & 2201, Zhenchang Factory, Renshan Industrial Zone, Fuhai Subdistrict, Bao'an District, Shenzhen, Guangdong, China   |         |
| Test model(s) .....        | A30   |         |
| EUT operation mode .....   | Mode 1, Mode 2, Mode 3, Mode 4  |         |
| Test results .....         | Pass  |         |
| Remark .....               | /   |         |

## 6.4.1. Test results for electrical fast transient/burst

| Measurement port | Level | Polarity            | Observation   | Results |
|------------------|-------|---------------------|---|---------|
| AC power port    | 1 kV  | Positive & Negative | <input checked="" type="checkbox"/> 1 <input type="checkbox"/> 2 <input type="checkbox"/> 3 | Pass    |

## 6.4.2. Test results of observations description

|   |
|---|
| / - Not performed or not required.  |
| 1 –No obvious change of function was found after the test.  |
| 2 –The function stopped during the test, but can be recoverable by itself operation after the test. |
| 3 –The function stopped during the test, but can be recoverable manually after the test.            |

## 6.5. Surge immunity

| Test requirement .....   | EN 55035:2017+A11:2020   |                |  |
|--|--|----------------|--|
| Basic standard .....   | EN 61000-4-5:2014+A1:2017  |                |  |
| Test level .....   | Measurement port   | Coupling point | Open-circuit peak voltage                                    |
|  | Input a.c. power ports   | Line to line   | ±1 kV  |
|  |  | Line to earth  | ±2 kV  |
|  | Input d.c. power ports   | Line to earth  | ±0.5 kV  |
|  | Analogue/digital data ports (a), (b)   | Line to earth  | ±1 kV and ±4 kV<br>Apply when primary protection is intended |
|  | Analogue/digital data ports (b)  | Line to earth  | ±1 kV<br>Apply when primary protection is not intended       |
|  | Analogue/digital data ports coaxial or shielded (c)  | Line to earth  | ±0.5 kV  |
| Supplementary information:<br>(a): Surges are applied with primary protection fitted. Where possible, use the actual primary protector intended to be used in the installation.<br>(b): Where the surge coupling network for the 10/700 (5/320) $\mu$ s waveform affects the functioning of high speed data ports, the test shall be carried out using a 1.2/50 (8/20) $\mu$ s waveform and appropriate coupling network.<br>(c) Surges are applicable to ports which satisfy all the following conditions:<br>-may connect directly to cables that leave the building structure,<br>-defined as an antenna port (3.1.3), a wired network port (3.1.34), or a broadcast receiver tuner port (3.1.8). |  |                |  |
| Repetition rate .....  | 1/min  |                |  |
| Phase angles .....   | Positive pulses are applied 90° and negative pulses are applied 270°   |                |  |
| Number of pulses for each coupling .....   | 5  |                |  |
| Performance criteria .....   | B  |                |  |
| Test method .....  | Mains power tests were conducted with the product connected to a Coupling/Decoupling Network (CDN). The test voltage was increased from the lowest indicated level up to the maximum level. Five positive polarity pulses at the 90° phase angle, five negative polarity pulses at the 270° phase angle. Each surge was applied 60 seconds after the previous surge. Signal and Telecommunications ports were subject to five (5) positive and five (negative) surges applied through the appropriate Coupling/Decoupling Network (CDN). |                |  |
| Ambient temperature .....  | 24.4 °C  |                |  |
| Relative humidity .....  | 52 %   |                |  |
| Air pressure .....   | 101.1 kPa  |                |  |
| Test location .....  | 2101 & 2201, Zhenchang Factory, Renshan Industrial Zone, Fuhai Subdistrict, Bao'an District, Shenzhen, Guangdong, China  |                |  |
| Test model(s) .....  | A30  |                |  |
| EUT operation mode .....   | Mode 1, Mode 2, Mode 3, Mode 4   |                |  |

|                     |      |
|---------------------|------|
| Test results..... : | Pass |
| Remark..... :       | /    |

## 6.5.1. Test results for surge

| Measurement port |     | Level | Polarity | Observation   | Results |
|------------------|-----|-------|----------|---|---------|
| AC power port    | L-N | 1 kV  | Positive | <input checked="" type="checkbox"/> 1 <input type="checkbox"/> 2 <input type="checkbox"/> 3 | Pass    |
|                  |     |       | Negative | <input checked="" type="checkbox"/> 1 <input type="checkbox"/> 2 <input type="checkbox"/> 3 | Pass    |

## 6.5.2. Test results of observations description

/ - Not performed or not required.

1 –No obvious change of function was found after the test.

2 –The function stopped during the test, but can be recoverable by itself operation after the test.

3 –The function stopped during the test, but can be recoverable manually after the test.

## 6.6. Immunity to conducted disturbances, induced by radio-frequency fields

|                            |  |  |
|----------------------------|--|--|
| Test requirement .....     | EN 55035:2017+A11:2020   |  |
| Basic standard .....       | EN IEC 61000-4-6:2023  |  |
| Frequency range .....      | 150 kHz to 80 MHz  |  |
| Test level.....            | Measurement port   | Frequency range / discrete frequencies<br><br>0.15 MHz to 10 MHz; 3 V<br>10 MHz to 30 MHz; 3 V to 1 V<br>30 MHz to 80 MHz; 1 V |
|                            | Input a.c. power ports   |  |
|                            | Input d.c. power ports   |  |
|                            | Analogue/digital data ports  |  |
|                            | xDSI   |  |
| Dwell time .....           | 1 second   |  |
| Step size .....            | 1 %  |  |
| Modulation .....           | 80% AM (1kHz)  |  |
| Performance criteria ..... | A  |  |
| Test method .....          | The test allows estimating of the conducted immunity of electrical and electronic equipment to electromagnetic disturbances coming from intended radio-frequency (RF) transmitters in the frequency range 150 kHz to 80 MHz. The interference is applied on mains supply, signal line and earth connection ports by using coupling decoupling networks or a clamp. |  |
| Ambient temperature.....   | 24.6 °C  |  |
| Relative humidity .....    | 54 %   |  |
| Air pressure.....          | 101.1 kPa  |  |
| Test location .....        | 2101 & 2201, Zhenchang Factory, Renshan Industrial Zone, Fuhai Subdistrict, Bao'an District, Shenzhen, Guangdong, China  |  |
| Test model(s) .....        | A30  |  |
| EUT operation mode.....    | Mode 1, Mode 2, Mode 3, Mode 4   |  |
| Test results .....         | Pass   |  |
| Remark.....                | /  |  |

## 6.6.1. Test results for Immunity to injected currents

| Measurement port | Frequency          | Coupling type | Level      | Observation   | Results |
|------------------|--------------------|---------------|------------|---|---------|
| AC power port    | 0.15 MHz to 10 MHz | CDN           | 3 V        | <input checked="" type="checkbox"/> 1 <input type="checkbox"/> 2 <input type="checkbox"/> 3 | Pass    |
|                  | 10 MHz to 30 MHz   |               | 3 V to 1 V | <input checked="" type="checkbox"/> 1 <input type="checkbox"/> 2 <input type="checkbox"/> 3 | Pass    |
|                  | 30 MHz to 80 MHz   |               | 1 V        | <input checked="" type="checkbox"/> 1 <input type="checkbox"/> 2 <input type="checkbox"/> 3 | Pass    |

## 6.6.2. Test results of observations description

/ - Not performed or not required.

1 –No obvious change of function was found after the test.

2 –The function stopped during the test, but can be recoverable by itself operation after the test.

3 –The function stopped during the test, but can be recoverable manually after the test.

## 6.7. Broadband impulse noise disturbances for xDSL ports

|                               |  |           |                            |                                   |

| Performance criteria .....    | A(repetitive)<br>B(isolated)   |           |                            |                                   |
| Test set up description ..... | Measurements were made on a ground plane that extends 0.5-meter minimum beyond all sides of the system under test. The EUT was located 10cm above the reference ground plane and any associated I/O cables attached to the EUT were located between 30mm and 50mm above the ground plane. The indicated field was pre-calibrated prior to placement of the system under test.<br>For the repetitive impulse test the disturbance shall be applied for a period of at least 2 min for each port under test.<br>For the isolated impulse test a minimum of 5 isolated impulses shall be applied with an interval of at least 60 s between successive impulses. |           |                            |                                   |
| Ambient temperature .....     | /  |           |                            |                                   |
| Relative humidity .....       | /  |           |                            |                                   |
| Air pressure .....            | /  |           |                            |                                   |
| Test location .....           | /  |           |                            |                                   |
| Test model(s) .....           | /  |           |                            |                                   |
| EUT operation mode .....      | /  |           |                            |                                   |
| Test results .....            | N/A  |           |                            |                                   |
| Remark .....                  | This test isn't applicable because the EUT doesn't have relative function.   |           |                            |                                   |

## 6.8. Power frequency magnetic field immunity (PFMF)

|                            |  |     |
|----------------------------|--|-----|
| Test requirement .....     | EN 55035:2017+A11:2020   |     |
| Basic standard .....       | EN 61000-4-8:2010  |     |
| Test level .....           | Frequency  | A/m |
|                            | 50/60 Hz   | 1   |
| Performance criteria ..... | A  |     |
| Test method .....          | Measurements were made on a ground plane that extends 1-meter minimum beyond all sides of the system under test. The EUT was located 80cm above the reference ground plane and the indicated field was pre-calibrated prior to placement of the system under test. |     |
| Ambient temperature .....  | 24.1 °C  |     |
| Relative humidity .....    | 49 %   |     |
| Air pressure .....         | 101.1 kPa  |     |
| Test location .....        | 2101 & 2201, Zhenchang Factory, Renshan Industrial Zone, Fuhai Subdistrict, Bao'an District, Shenzhen, Guangdong, China  |     |
| Test model(s) .....        | A30  |     |
| EUT operation mode .....   | Mode 1, Mode 2, Mode 3, Mode 4   |     |
| Test results .....         | Pass   |     |
| Remark .....               | /  |     |

### 6.8.1. Test results for Power frequency magnetic field immunity

| Point of application | Frequency (Hz) | Level | Results |
|----------------------|----------------|-------|---------|
| X-Axis               | 50             | 1 A/m | Pass    |
| Y-Axis               | 50             | 1 A/m | Pass    |
| Z-Axis               | 50             | 1 A/m | Pass    |

### 6.8.2. Test results of observations description

|   |
|---|
| / - Not performed or not required.  |
| 1 -No obvious change of function was found after the test.  |
| 2 -The function stopped during the test, but can be recoverable by itself operation after the test. |
| 3 -The function stopped during the test, but can be recoverable manually after the test.            |

## 6.9.Voltage dips, short interruptions and voltage variations immunity

|                                       |   |                       |            |
|---------------------------------------|---|-----------------------|------------|
| Test requirement .....                | EN 55035:2017+A11:2020  |                       |            |
| Basic standard .....                  | EN IEC 61000-4-11:2020  |                       |            |
| Test level .....                      | Voltage Dips  |                       |            |
|                                       | Frequency   | Test level in % $U_T$ | Duration   |
|                                       | 50 Hz   | 0                     | 0.5 cycle  |
|                                       | 50 Hz   | 70                    | 25 cycles  |
|                                       | 60 Hz   | 70                    | 30 cycles  |
|                                       | Voltage interruptions   |                       |            |
|                                       | Frequency   | Test level in % $U_T$ | Duration   |
|                                       | 50 Hz   | 0                     | 250 cycles |
|                                       | 60 Hz   | 0                     | 300 cycles |
|                                       | $U_T$ is the rated voltage of the equipment under test.   |                       |            |
| Repetition rate .....                 | 10 seconds  |                       |            |
| Number of dips or interruptions ..... | 3   |                       |            |
| Performance criteria .....            | B & C   |                       |            |
| Test method .....                     | The test allows estimating of the conducted immunity of electrical and electronic equipment connected to low-voltage power supply networks for voltage dips and short interruptions. The interference is applied on mains supply port by using a testing generator. |                       |            |
| Ambient temperature .....             | 24.4 °C   |                       |            |
| Relative humidity .....               | 52 %  |                       |            |
| Air pressure .....                    | 101.1 kPa   |                       |            |
| Test location .....                   | 2101 & 2201, Zhenchang Factory, Renshan Industrial Zone, Fuhai Subdistrict, Bao'an District, Shenzhen, Guangdong, China   |                       |            |
| Test model(s) .....                   | A30   |                       |            |
| EUT operation mode .....              | Mode 1, Mode 2, Mode 3, Mode 4  |                       |            |
| Test results .....                    | Pass  |                       |            |
| Remark .....                          | /   |                       |            |

## 6.9.1. Test results for Voltage dips

| % of $U_T$ | Frequency | Duration in cycles | Sync Angle | Observation   | Results |
|------------|-----------|--------------------|------------|---|---------|
| 0          | 50 Hz     | 0.5                | 0°         | <input checked="" type="checkbox"/> 1 <input type="checkbox"/> 2 <input type="checkbox"/> 3 | Pass    |
| 70         | 50 Hz     | 25                 | 0°         | <input checked="" type="checkbox"/> 1 <input type="checkbox"/> 2 <input type="checkbox"/> 3 | Pass    |

## 6.9.2. Test results for Voltage interruptions

| % of $U_T$ | Frequency | Duration in cycles | Sync Angle | Observation   | Results |
|------------|-----------|--------------------|------------|---|---------|
| 0          | 50 Hz     | 250                | 0°         | <input type="checkbox"/> 1 <input checked="" type="checkbox"/> 2 <input type="checkbox"/> 3 | Pass    |

## 6.9.3. Test results of observations description

/ - Not performed or not required.

1 –No obvious change of function was found after the test.

2 –The function stopped during the test, but can be recoverable by itself operation after the test.

3 –The function stopped during the test, but can be recoverable manually after the test.
